

20.02.02 EMERGENCY PROTECTION

It is important for future rescuers to know the basics of ensuring life support in an extreme situation, the basics of fire extinguishing, and conducting emergency rescue operations.

Additionally, technological training is carried out: specialists must be able to independently repair and maintain the equipment used in the work .

Psychology and medical and biological training become an indispensable element of the training program. From the second year, practical training usually begins at the educational institution.

Specially equipped training camps with a complex of educational facilities allow students to develop physical qualities and consolidate their theoretical training.

Where will they teach ?

Mid-level specialists in the specialty "Protection in emergency situations" are trained at the USTU College of Security and Law .

Number of seats:

15 budget places for full-time education,

20 contractual places for full-time study.

Duration of training: 3 years 10 months.
